

Maaz Surti

iOS Developer

Ahmedabad, India • hello@maazsurti.com • +91 9586565254 • [Portfolio](#) • [LinkedIn](#)

iOS Developer with 6+ years taking apps from idea to App Store. I lead the mobile team (iOS and Android) and have shipped 8+ apps on the App Store and TestFlight. Stack: Swift, UIKit, SwiftUI, Flutter, and CI/CD with Fastlane and GitHub Actions. I practice TDD, keep the architecture clean, and focus on long-term maintainability or short-term gains depending on the situation. All in all, I am adaptable.

Relevant Experience

iOS Developer

Sep 2020 – Present

Raw Code Developers - Kuwait City, Kuwait (Remote)

- Lead the mobile development team (iOS and Android) and mentor team members.
- Spearheaded CI/CD pipelines using Fastlane and GitHub Actions, reducing release cycle time from weeks to days.
- Applied Test-Driven Development and clean architecture across a long-lived, multi-team codebase.
- Implemented push notifications and remote configuration for engagement and personalization.
- Developed and maintained client apps in Swift and Objective-C.
- Partnered with designers and stakeholders to scope work and set realistic timelines.

Projects

SecondHand Souq | SwiftUI, Fastlane, REST APIs | [App Store Link](#)

- Led iOS development of a second-hand marketplace app, turning business requirements into a scalable mobile product.
- Worked with stakeholders on product flows, user journeys, and marketplace features.
- Architected a clean, maintainable structure that balances speed with long-term scalability.
- Designed listing, browsing, and discovery flows that reduce friction for buyers and sellers.
- Drove English & Arabic localization for the Middle Eastern market.
- Owned performance, stability, and platform support across iPhone, macOS, and visionOS from one codebase.
- Kept Apple privacy compliance tight with minimal data collection.
- Ran the App Store release cycle from build to submission and post-launch updates.

LorryNow | SwiftUI, Fastlane, REST APIs | [App Store Link](#)

- Led LorryNow, an on-demand logistics and transport booking app, turning complex operations into a simple consumer experience.
- Worked with product and business stakeholders on booking flows, pricing visibility, and service options.
- Built instant lorry booking, vehicle selection, and helper add-ons.
- Added real-time tracking and driver coordination for delivery transparency.
- Kept performance and error handling solid in time-sensitive booking scenarios.
- Led English & Arabic localization for regional expansion.
- Owned the release cycle and post-launch improvements from user feedback.

Slate | Flutter, drift/SQLite, Offline-first | [Live Demo](#)

- Built the Flutter app from domain model to offline database.
- Designed quick-sale flows, inventory, reporting, and customer credit ledgers.
- Kept daily shop work available offline with a local drift/SQLite database.
- Localized for English and Gujarati.
- Shipped an interactive web demo of the app on GitHub Pages.

Education

LDRP-ITR, Gandhinagar, Gujarat, India
Bachelor of Science in Computer Science

2016 - 2020

Skills

Languages: Swift, Dart, JavaScript, HTML/CSS

Frameworks: UIKit, SwiftUI, Flutter, SvelteKit

Practices: TDD, Clean Architecture, MVVM

Developer Tools: Git, GitHub, Fastlane, Xcode, Visual Studio Code
